

Scrittore Site Private Area Guide

Updated instructions for planning, writing, checking, saving and exporting a book

This guide explains the functions available after sign in. It does not cover the public home page, registration or external checkout. The quote shown in the app before an action is always the price to rely on.

Scrittore Site

Private Area

1 Getting oriented

The private area keeps the whole book in one project: brief, outline, manuscript, sources, images and checks. You can read and manually edit text at any time.

The main areas

Area	Purpose
Sidebar	Set up the account and the editorial brief.
Project Centre	Shows Brief, Outline, Manuscript, Sources and the suggested next step. It does not edit content.
Operational Centre	Contains the Niche chat and sections 0-5. Follow the route or open the tool you need.

Recommended route

- Optionally use the Niche chat first to think about the market.
- Open section 0 and use Guided chat to prepare the brief.
- Complete the sidebar, generate the outline, then write one section or the whole book.
- Check Preview, save the session and export when the manuscript is ready.

2 Account sidebar and project

The sidebar contains language, AI engine, balance and brief. Book personalisation remains optional and must not prevent outline generation.

Account commands

Command	What it does	When to use it
Refresh credit balance	Reads the current account balance.	After a purchase or referral reward.
Top up credits	Opens packages and secure checkout.	When you want to buy credits.
Invite and earn credits	Shows your referral link, invitations and earned rewards.	To share the software.
Sign out	Saves an updated project snapshot and closes the session.	Wait for the sign in screen.
Reset project	Deletes the open project: sidebar, outline, text, sources, images, memory and cache.	Only when starting a genuinely new project.

Language, AI engine and pricing

- Choose the language before creating the outline and manuscript: labels, chats, prompts and output follow it.
- GPT offers the full route, including supported web research and checks. DeepSeek offers a compatible route with lighter pricing.
- Open the pricing list below the selected engine. The quote displayed before an action always takes precedence over examples or guides.
- Small DeepSeek actions may be counted in units: three units equal one credit.

The editorial brief

Group	Fields	Why they matter
Identity	Title and author	Header, exports and metadata.
Direction	Genre, writing type, narrative style and point of view	Tone, structure and writing depth.
Goal	Topic or plot, reader, desired result	Concrete direction for the outline and writing.
Further details	Constraints, examples, facts and audience	Useful information that does not fit elsewhere.
Length	Compact, Standard KDP, In depth	Plans sections and pages without adding filler.

3 Niche chat and Guided chat

Both chats are optional and have different roles. They use the language and AI engine selected in the sidebar; the reply cost is shown in the interface before use.

Section -1 Niche chat

- Use it to discuss reader, market, demand, competition and editorial opportunity.
- It asks which market you want to analyse and can go deeper after your confirmations.
- It does not change the sidebar, outline, credits in the project or manuscript.
- At the end it creates only a final prompt to copy manually into Guided chat.

Section 0 Guided chat

- Open Guided chat, describe your idea and answer the useful questions. The chat should take you towards the brief, not drift into a generic conversation.
- Before preparing the form, it always asks whether you want to personalise the book and how.
- If you ask the chat to propose the personalisation, it may use imagination consistently with what you described, without inventing real personal experiences for you.
- When the form is ready, use Prepare the sidebar form and then apply the fields. The proposal uses only values actually available in the sidebar.
- You can fill only empty fields or replace existing ones. Review the proposal before applying it.

Personalise your book

Field	Use
Personal voice, material, priorities and boundaries	Make the project more individual when relevant.
Checkpoint mode	Chooses whether full-book writing should stop before Parts or the conclusion.
Checkpoint notes	Describe a decision you want to revisit during a pause. Leave it empty if not needed.

4 Sources and project memory

Sources and memory keep work organized. They do not replace user verification or grant permission to copy protected content.

Optional sources

- Upload PDF or DOCX files: the software builds a conceptual map to guide the outline and text. It must not reuse source wording in the manuscript.
- Regenerate web sources: the system searches and keeps only sources it considers useful for the brief. Sources not selected are not kept visible.
- Sources guide writing and checks; they do not automatically become a bibliography or published text.

Editorial memory

- The brief, outline, written sections and approved edits feed a structured editorial memory.
- Every new section receives a useful summary to maintain consistency, respect established decisions and reduce repetition.
- Memory does not block manual edits. If you change text, save the session so the project keeps the current version.

Saving and recovery

Button	What it does
Save session	Saves sidebar, outline, sections, sources, images and project memory in your account.
Refresh latest draft	Voluntarily restores the latest account snapshot. Use after sign in, sign out, page refresh or changing device.
Refresh page	Reloads the interface. Save first after important edits.
Sign out	Attempts a final save before closing. For a portable copy, also export CSV.

5 Professional outline

Section 1 turns the brief into an editable structure. The outline also includes the Preface and defines the sections available in the editor.

What the controls do

Control	Result
Generate professional outline	Studies the brief and, if enabled, research. Produces a hierarchical outline with a Preface.
Progress bar	Shows the generation stage. If no usable outline appears, it does not delete the existing project.
Outline score or review	Highlights possible improvements. A warning must not add useless entries or block an otherwise valid outline.
Save and synchronize chapters	Makes outline entries available in Writing, Preview and export.
Manual edit	You can revise titles and structure. Save and synchronize again after editing.

Length and quality

- Compact targets a shorter complete book; Standard KDP a medium manuscript; In depth a more extensive treatment.
- The system considers page targets and tolerances, but must not add chapters or subsections merely to reach a number.
- If an outline exceeds a recommended maximum, it can still be published with a warning. A coherent structure matters more than artificial splitting.

6 Writing and Quiz

In section 2, write one entry at a time or start full-book writing. Generated text remains editable in the professional editor.

Write one section

- Choose an entry and press Write detailed content. The result is saved and should appear in both editor and preview.
- Rework with AI improves the selected section according to a specific request. It does not change the rest of the manuscript.
- Quizzes and examples depend on genre and brief. Always verify questions, answers and facts before publishing.

Write the entire book

- Works automatically one section at a time, including the Preface, using the same route as detailed writing.
- The progress bar shows the current section and completed entries. Finished text should remain readable while the operation runs.
- Pause temporarily stops the automatic sequence and preserves completed work. Resume continues with missing sections.
- Stop permanently ends writing while retaining the saved outline and text. You can continue later without regenerating everything.

Manual edits

- You may rewrite text directly in the editor. Save the session after an important change.
- Do not remove an outline entry if you want it to remain in Preview and export. If you edit the outline, synchronize it again.

7 Preview

Section 3 lets you read the book as a continuous manuscript before export.

- Use the clickable outline to reach a section, manuscript search to find words or sentences, and voice reader to listen to text.
- The page estimate uses written words and a cautious forecast for empty sections. It is an indicator, not a promise of final pages.
- Manual edits and generated sections should be visible here after saving and synchronizing the outline.

8 Import Export Copyright

Section 4 brings together backup, recovery, checks and final files. Export remains available, but editorial warnings invite you to correct work before publishing.

Complete CSV

Control	What it does
Export complete project CSV	Downloads sidebar, outline, sections, sources, associated images and useful memory as a portable copy.
Import and restore project	Loads a CSV exported by the software and restores the project in the current page.
Check manuscript completeness	Flags empty, incomplete or promised-but-missing sections. It does not rewrite the book automatically.

Originality, copyright and KDP

- Local originality check compares the manuscript only with uploaded PDF and DOCX files. It does not consult web sources.
- Full copyright checking may use web sources and AI analysis to flag similarities or points to review. It is not a legal originality certificate and cannot guarantee approval.
- KDP compliance check first consults current official KDP guidelines, then analyses written manuscript sections. It produces a report, does not change text and cannot guarantee Amazon publication.
- In Ready to publish, structure, manuscript and completed phrases should be checked. Originality may remain to review without technically preventing export.

Word and PDF

- Download Word to continue editing in an external editor.
- Download PDF to read a laid-out manuscript version. Always check the final file before sending it to a publishing platform.

9 KDP formatting and metadata

Section 5 prepares useful materials before final publication.

Function	What it does
Generate detailed metadata	Analyses an uploaded manuscript and proposes a marketing description and seven long-tail keywords in the selected language.
Format document	For DOCX, applies 6 x 9 settings, margins, fonts, headings, indents, justified text and page numbers.
Download Word 6 x 9	Downloads the formatted DOCX. Always verify it in your layout program or the KDP checker.

10 Credits, safety and good practice

The app shows a quote before paid AI actions and records technical activity in the administrator panel when available.

- Reading, manual editing, saving, importing and exporting do not use credits.
- Outlines, writing, chats, research, checks and metadata may use credits. Always check the button quote and the price list for the selected engine.
- Do not paste unnecessary sensitive data. Keep a project CSV and manually verify facts, quotations, rights, technical details and publishing platform requirements.
- The software never publishes books automatically. The final decision, editorial review and compliance with KDP rules remain the user's responsibility.

If something is not visible

- After sign in or changing device, press Refresh latest draft to retrieve the account save.
- If a written section is not visible, check that the outline was saved and synchronized, then open the section again in the editor.
- To delete everything and start a new book, use Reset project. It is the only command designed to clear the whole open project.
