

Scrittore Site Private Area Guide

Complete instructions for planning writing reviewing and saving a book

This guide covers only the private area available after sign in. It explains every main sidebar field, button and workspace. The public home page, account registration and external checkout are not included.

The recommended route is simple: configure the project, create the outline, write the sections, review the preview, save and export. You can always return to an earlier step. Reading, manual editing, saving, CSV import and export do not use credits.

What the software keeps

- The sidebar brief: title, author, language, genre, style, audience, goal and personal instructions.
- The approved outline, written sections, sources, externally uploaded images and manual edits.
- The latest version saved in the account and a complete CSV that can be downloaded as a portable backup.
- Account credits and technical activity. The administrator panel can also show aggregated AI usage statistics.

Important: the book is never published automatically. The user decides when to edit, export or use the final file.

1 Finding your way around the private area

After sign in, the page has three main zones: the sidebar on the left, the Project Centre at the top and the workspace tabs in the centre. The Project Centre is informational only. It does not change the manuscript.

Indicator	Meaning	What to do
Brief	Shows how many required project settings are completed.	Complete the required sidebar fields. Personalisation fields are optional.
Outline	Shows whether there is a saved and usable book structure.	Generate or import an outline in the Outline tab.
Manuscript	Counts saved sections against the number planned.	Write one section or use Write the entire book.
Sources	Counts web sources or documents already analysed.	They support the editorial process; they are not compulsory for every book.
Working status	Suggests the most useful next step in the current workflow.	It is guidance only. It does not delete content or block manual editing.

The main tabs

- 0 How to use Scritture Site: built in instructions, a copyable prompt and optional guided chat.
- 1 Outline: research, professional structure, editorial review and outline regeneration.
- 2 Writing and Quiz: individual section writing, full book writing, revisions, quizzes and examples.
- 3 Preview: continuous reading view, search, voice reader, clickable outline and page estimate.
- 4 Import Export Copyright: CSV, completeness checks, originality, Word, PDF and publication preparation.
- 5 Formatting: manuscript presentation settings before final export.

2 Account sidebar and general commands

The upper sidebar contains account commands. Except for save and reset, these commands do not change the editorial content of the book.

Pulsante o comando	Cosa fa	Da sapere
Enable light theme or return to dark theme	Changes only the visual appearance between dark mode and a light blue interface.	It does not change books, credits, outlines or editorial settings.
Refresh credit balance	Reads the current account balance again.	Useful after a purchase or credit grant. It does not make a payment.
Contacts	Shows how to request support.	Use it for documented access, payment or technical issues.
Top up credits	Shows available packages and the secure payment link.	Credits arrive after payment confirmation. Existing work remains available even when credits run out.
Invite and earn credits	Shows the personal referral link and invitation status.	Rewards follow the rules shown in the software, after an invited person makes their first eligible purchase.
Sign out	Saves a complete project snapshot before closing the session.	Wait until the sign in page appears. Sign out is not a replacement for a CSV backup.

Additional panels may appear for administrators, such as credit administration, automatic testing and AI usage. They are not needed to write a normal book.

Language and AI engine

Field	How to use it
Language	Choose the project language before creating the outline and text. Labels, prompts, guided chat and editorial generation adapt to the selected language.
AI engine	GPT 5.4 provides the full route, including web research and web based checks. DeepSeek V4 Pro offers lighter pricing for compatible writing, outlining, sources and editorial checks.
Pricing	Open the expandable pricing list below the selected engine. The quote shown before an action is the price that matters.

With DeepSeek, small actions are counted in units. Three DeepSeek units equal one credit, so a small action can use one unit without immediately taking a full credit from the balance.

3 Setting up the project in the sidebar

The sidebar is the brief that guides the outline, text, checks and metadata. Complete it with specific information. Personal fields are optional. Leaving them empty must not prevent the project from moving forward.

Group	Fields	Practical purpose
Identity	Book title and Author name	Used in the project header, exported files and metadata.
Editorial direction	Literary genre, Writing type, Narrative style and Point of view	Defines tone, structure, degree of explanation and narrative perspective.
Goal	Book goal, Desired final outcome and Topic or plot	Explains who the book is for, what the reader should gain and which path the book should follow.
Further details	Additional details	Use for constraints, examples, readers, essential facts or requests that do not fit elsewhere.
Length	Compact, Standard or In depth	Defines the ambition of the manuscript. It influences section planning and editorial thresholds but never authorises filler.

Optional sources and research

- Upload PDF or DOCX files: the software builds an internal conceptual map. It must not reuse source wording in the manuscript.
- Regenerate web sources: finds sources aligned with the brief and keeps visible only those selected as useful for the project.
- Sources guide the AI and support checks. They do not automatically become book text or a published bibliography.

Personalise your book

This area is optional. Use Personal voice, Personal material, Personal priorities and Personal boundaries to make the book more individual. You can describe lived experience, a tone to avoid, a particular reader or a point of view to develop. The instructions are used only when relevant and should not be repeated artificially in every section.

Field	Effect
Checkpoint mode	Decides whether automatic writing should stop at agreed points to request an instruction before continuing.
Checkpoint notes	Describe which decisions you want to review during writing. Leave it empty if you do not need it.
Guided chat	An optional assistant that talks in the chosen language, gathers information and proposes a brief that can be applied to the sidebar automatically.

4 Session memory and project recovery

The software maintains one project memory: sidebar, outline, text, sources and images belong to the same project. Manual saving is the safest choice before closing the browser, making a major change or moving to another device.

Pulsante o comando	Cosa fa	Da sapere
Save session	Sends a complete snapshot of the open project to your account.	Use it after important manual edits. It does not use credits.
Refresh latest draft	Voluntarily restores the most recent project saved in your account.	Use after sign in, sign out, a page refresh or changing device. It restores the last saved snapshot rather than merging different drafts.
Refresh page	Reloads the interface while keeping the session active.	If you have just edited a lot of text, use Save session first.
Reset project	Deletes the saved project and clears fields, outline, text, sources and images from the current draft.	It is red because it is permanent. It does not change credits or the account. Export a CSV first if you want to keep the draft.
View saved data	Shows a summary of the saved sidebar, outline, sections and sources.	It is a checking tool. It does not change anything.

A practical safety rule

- Before a major change, use Save session and download the complete CSV as well.
- After signing in again, use Refresh latest draft to reopen your saved work.
- Sign out saves the project first, but the CSV remains the portable copy that you can archive outside the software.

5 Tab 0 How to use Scrittore Site

The first tab is the built in guide. It does not generate a book and does not automatically change the project. It is especially useful at the beginning or when you want guided help.

Create your chat to fill in the sidebar

The expandable panel contains a prompt that can be copied into an external chat. The chat should first ask whether the user wants personalisation, then turn the answers into concrete instructions for the sidebar. This route is free because it does not use the internal AI.

Guided chat

Guided chat is the optional internal alternative. It opens in an expandable panel, speaks the selected language and uses the AI engine selected in the sidebar. It gathers only missing information, can use editorial imagination when asked to complete a part, and returns to a final sidebar sheet.

Pulsante o comando	Cosa fa	Da sapere
Send	Sends an answer to guided chat.	GPT uses 1 credit per answer. DeepSeek uses 1 unit, so 1 credit is used for every 3 answers.
Fill in the fields	Applies the guided chat proposal to sidebar fields.	Review the summary first. You can always edit every value manually afterwards.
Close and reset this chat	Clears only the current guided conversation.	It does not delete the book or sidebar fields already applied.

6 Tab 1 Outline

The outline is the hierarchical structure of the book. The software researches, proposes and checks it, while the user can read and edit it before manuscript writing begins. A short but complete structure is better than a long one with repeated entries.

Pulsante o comando	Cosa fa	Da sapere
Generate professional outline	Runs the preliminary research supported by the selected engine, designs an outline and applies editorial checks.	GPT costs 10 credits: 4 for research and 6 for editorial design. DeepSeek is estimated at about 3 1/3 credits.
Confirm and start	Confirms the operation after the quote is displayed.	Credits are requested before the AI call. If the operation fails, the process attempts a refund.
Cancel	Closes the quote without generating an outline.	No credits are used.
Publish outline	Saves the proposed outline as the book structure.	Publishing an outline does not publish the book online and does not create text sections.
Rate outline	Requests an editorial review of coherence, coverage, repetition and structural quality.	GPT costs 2 credits. DeepSeek is equivalent to 1 credit.
Regenerate outline using the review	Rewrites the outline using useful suggestions from the editorial review.	GPT costs 6 credits. DeepSeek is estimated at about 2 credits.

Length and structure limits

Profile	Target 6x9 pages	Maximum outline entries including preface
Compact	About 75 pages	65
Standard	About 150 pages	110
In depth	About 220 pages	160

These are editorial targets with a 15 percent tolerance. If a complete, high quality structure remains below the target, the software reports it but should not add filler or prevent outline publication.

7 Tab 2 Writing and Quiz

This is where the manuscript is produced. Saved sections are protected. Automatic writing looks for sections that are still empty, saves each result and keeps completed text readable.

Pulsante o comando	Cosa fa	Da sapere
Write the entire book	Writes every missing section automatically, one at a time, and saves after each section.	It does not require confirmation for every section. The quote depends on the number of sections that are still empty.
Pause	Stops the queue after the current safe point.	Completed sections stay saved and readable. You can review the preview and continue later.
Resume generation	Continues from the first section still missing.	It should not generate again sections that are already saved.
Stop permanently	Ends the automatic queue for that writing cycle.	Everything already created is kept. You can later start a new cycle for remaining sections.
Select section	Chooses the chapter, subsection or preface to work on.	Used for individual writing, text editing, AI revision and quizzes for the selected part.
Write detailed content	Generates only the selected section according to the brief, outline and chosen length.	GPT costs 1 credit. DeepSeek costs 1 unit.
Rewrite with AI	Rewrites the selected section according to the instruction entered in the nearby field.	Use a precise request, such as making the section more practical, adding an example or changing tone.
Quiz	Creates questions or exercises related to the selected section when suitable for the project.	Always review whether they are genuinely useful in the book.
10 examples	Proposes applied examples for the selected section when appropriate.	Do not use it if it would produce fictional or repetitive cases without value.
10 recipes	Generates a set of recipes for a cookbook or related content.	GPT costs 10 credits. DeepSeek is estimated at about 3 1/3 credits.

Text editor and images

The professional editor contains the selected section. You can correct, add or delete text manually. Manual edits remain the user's work and are included in the project save. Images are not generated inside the software: upload an external PNG, JPG or WEBP file. The uploaded image can appear in the preview, Word and PDF for its related section.

Tip: use Save session after a substantial manual change. During automatic writing, avoid editing the same section that the software identifies as being processed.

8 Tab 3 Preview

Preview is the manuscript reading view. It does not replace the editor. Use it to check continuity, order, pace, estimated pages and the presence of written sections.

Pulsante o comando	Cosa fa	Da sapere
Clickable preview outline	Opens or closes the list of navigable sections.	Select a title to move quickly to the relevant part.
Search in manuscript	Finds a word, concept or name in saved text.	Useful for spotting repetition, inconsistent terminology or passages that need review.
Listen to the book	Starts the free browser voice reader.	No credits are used. Check that the selected browser and voice support the feature.
Pause reader	Temporarily pauses voice playback.	This controls the reader, not automatic book generation.
Resume reader	Continues playback from the current position.	It does not change text or saved work.
Stop reader	Stops playback and closes the current reader activity.	To start again, select a section or manuscript again.

Page estimate

The tab shows an approximate 6x9 page count based on the words in sections that have already been written. Layout, images, fonts, headings and spacing can change the final page count in the exported file.

9 Tab 4 Import Export Copyright

This area contains transfer, checking and delivery preparation features. CSV is the best format for reopening the same project in the software. Word and PDF are the files for reading or final editorial review.

Pulsante o comando	Cosa fa	Da sapere
Export complete project CSV	Downloads a project copy containing sidebar, outline, sections, sources and related images.	Free to use. Keep it as a backup before resetting, major testing or transferring work.
Import and restore project	Uploads a Scrittore Site CSV and rebuilds the project in the current page.	Import replaces the current page draft. Use Save session after checking it if you also want it stored in the account.
Originality and copyright check	Opens checks that look for potential risk signals and prepare suitable verification.	Optional. A result marked for review always needs human judgement and is not legal advice.
Check manuscript completeness	Checks free of charge for missing, very short or clearly interrupted sections.	It does not rewrite content. Use it before exporting.
Prepare rewrite	Prepares a correction instruction for the section identified by the completeness check.	It improves the selected section rather than changing the full book without review.
Export Word	Creates an editable file for editorial review and layout work.	Check the file in Word or compatible software before publication.
Export PDF	Creates a file for reading, sharing or layout checking.	PDF does not replace CSV when you need to continue editing inside the software.

Ready to publish

The final summary separates structure, manuscript, complete sentences and originality. Originality checking is optional. If the outline and manuscript are ready, the software may invite export even if that optional check was not run. The author remains responsible for accuracy, rights, quotations, sources and the publication platform requirements.

10 Tab 5 Formatting

Formatting helps make the manuscript more consistent before export. It changes presentation, not the author's creative choices. Before broad formatting changes, save the session and keep a CSV backup.

- Use the available tools to make headings, body text, spacing and the exported manuscript presentation more consistent.
- Check Preview after applying formatting. A visual setting can increase or decrease the estimated page count.
- When preparing KDP, always verify the current requirements for margins, format, cover and pagination in the chosen platform before the final upload.

11 Credits and quotes

Credits are used only for AI operations. A quote appears before a paid action. Reading, manual editing, saving, recovery, CSV import, CSV export and Preview remain free.

Operation	GPT 5.4	DeepSeek V4 Pro
Write or rewrite one section	1 credit	1 unit per action; 3 units equal 1 credit
Complete outline	10 credits: 4 research plus 6 design	About 3 1/3 credits
Outline review	2 credits	1 credit
Regenerate outline using review	6 credits	About 2 credits
Web source research	4 credits	About 1 1/3 credits
Full coherence check	10 credits	About 3 1/3 credits
10 recipes	10 credits	About 3 1/3 credits
Guided chat	1 credit per reply	1 unit per reply

Quotes are displayed by the software at the time of the action. An administrator account can show unlimited credits in testing. Normal user accounts show actual credit deductions.

12 Recommended workflow from idea to final file

Step	Action	What to check
1	Choose language and AI engine, then complete identity and editorial direction.	The brief is complete and title, topic and goal are clear.
2	Add sources only if they are genuinely useful and add any personalisation.	Instructions give direction without forcing repetition.
3	Generate the professional outline and read it carefully.	Each part has a distinct purpose. There are no generic or duplicated entries.
4	Publish the outline, then write a test section or start Write the entire book.	The first section appears in both the editor and Preview after saving.
5	During writing use Pause or Stop if you want to intervene.	Created sections stay available and are not lost.
6	Read in Preview, search for repetitions and listen to sensitive passages.	The text is coherent, complete and in the intended language.
7	Save the session, export CSV and run the completeness check.	A recoverable copy exists and there are no missing sections.
8	Run optional checks, format the manuscript and export Word or PDF.	The final file is ready for editorial review or publication.

Common situations

Situation	What to do
The book does not appear after sign in	Use Refresh latest draft. If you have a recent CSV, import it in the Import Export tab.
A section does not seem visible	Open Writing and Quiz, select the section and check the editor, View saved data and Preview. Do not start another generation before checking all three.
Automatic writing is paused or stopped	Read the status message. Use Resume generation to continue remaining sections. Use Stop permanently only when you want to end the queue.
I do not like a text	Write a precise instruction in Rewrite with AI or edit the text manually. Save the session afterwards.
I need to make a risky test	Export the complete CSV first. Reset deletes the current draft and the copy saved in the account.

Final checklist

- ☐ I checked title, author, language and goal in the sidebar.
- ☐ The outline is coherent and contains no unnecessary or repetitive entries.
- ☐ Every planned section is readable in both the editor and Preview.
- ☐ I checked completeness, continuity and manual edits.
- ☐ I saved the session and downloaded a complete CSV.
- ☐ I checked Word and PDF before delivering or publishing the book.
