

Scrittore Site Private Area Guide

Updated instructions to plan, write, check, save and export a book

This guide explains the features available after you sign in. It does not cover the public home page, registration or external payment. The costs shown in the app before each action always prevail.

What's new in version 7x

- The two AI engines are now called **Expensive brain** and **Economy brain**.
- New **Book plan** for every genre: outline, hidden truth and setups for novels, thesis for essays, objectives and prerequisites for manuals.
- A **consistency sheet** that updates itself after every section, and **chapter review**.
- For novels: choose **who tells the story** and the **tense**, with dedicated writing instructions.
- The **Guided chat** also fills in the book plan automatically.
- Uncertain facts marked **[TO VERIFY]** and new advice in the final check.

Scrittore Site

Private area · version 7x

1 Getting started

The private area keeps the whole book in one project: brief, book plan, outline, manuscript, sources, images and checks. You can read and edit the texts manually at any time.

Areas of the page

Area	What it is for
Sidebar	Sets up the account, the AI engine and the editorial brief of the book.
Project Centre	Shows Brief, Outline, Manuscript, Sources and the next recommended step. It changes nothing.
Operational Centre	Contains the Niche chat and sections 0-5. Follow the path or open what you need directly.

Recommended path

- Optionally, use the Niche chat first to think about the market.
- Open section 0 and use the Guided chat: it prepares the brief and also fills in the book plan.
- Apply the form to the sidebar, choose the engine and generate the outline.
- In Write the book, check the **Book plan** panel, then write one section or the whole book.
- Review the chapters, check Preview and the Ready to publish report, save the session and export.

2 Sidebar, account and project

The sidebar contains language, AI engine, balance and brief. Book personalisation stays optional and must not block the outline.

Account commands

Command	What it does	When to use it
Refresh credit balance	Reloads the real account balance.	After a purchase or a referral reward.
Top up credits	Opens packages and secure payment.	When you want to buy credits.
Invite and earn credits	Shows referral link, invitations and rewards.	To share the software.
Sign out	Saves an updated snapshot of the project and closes the session.	Wait for the sign-in screen.
Reset project	Deletes the open project: sidebar, outline, texts, sources, images, memory and cache.	Only to really start a new project.

Language and AI engine

• Choose the language before creating outline and manuscript: labels, chats, prompts and text follow it. 9 languages are available.

• **Expensive brain**: the complete path, including web research, web copyright check and online fact check.

• **Economy brain**: the same writing path with lighter consumption; web features remain available only with the Expensive brain.

• Open the price list below the selected engine. The estimate shown before starting always prevails over examples or guides.

• With the Economy brain small operations can be counted in units: three units equal one credit.

The editorial brief

Group	Fields	Why they matter
Identity	Title and author	Header, exports and metadata.
Direction	Genre, writing type, style, pacing	Tone, structure and depth of the writing.
Point of view	Essays and manuals: You, Plural you, We or Impersonal. Novels: **who tells the story** (first person, close third, omniscient, multiple points of view) and **tense** (past or present).	Keeps the same voice throughout the book.
Goal	Topic or plot, reader, desired result	Concrete direction for outline and sections.
Further details	Constraints, examples, facts, audience	Useful information that does not fit elsewhere.
Length	Compact, Standard KDP, In depth	Plans sections and pages without filler.

3 Niche chat and Guided chat

Both chats are optional and have different roles. They always use the Expensive brain and the selected language; the cost of each reply is shown before use.

Niche chat

• Helps you discuss reader, market, demand, competition and publishing opportunity.

• It does not change sidebar, outline or manuscript: at the end it produces a prompt to copy into the Guided chat.

Section 0 · Guided chat

• Describe your idea, even in one sentence. The chat asks only useful questions and always asks whether you want to personalise the book.

• It prepares a form with all sidebar fields and, **automatically**, the book plan too:

• **novels**: who tells the story, tense, characters and world, hidden truth with timeline, setup map;

• **essays**: central thesis, the reader's problem and key ideas;

• **manuals**: learning objectives, prerequisites and useful extras.

• Apply the form by filling only empty fields or replacing existing ones. Check the proposal before applying it.

• The chat never invents personal experiences attributed to you; biographies use only known real facts.

Personalise your book

Field	Use
Personal voice, material, priorities and boundaries	Make the project more individual when relevant.
Checkpoint mode	Chooses whether full writing pauses before Parts or before the conclusion.
Checkpoint notes	Write which choice you want to review during a pause. Leave empty if not needed.

4 Sources, memory and consistency

Sources, memory and the consistency sheet keep the book orderly and consistent. They do not replace your own checks or authorise copying protected content.

Optional sources

• Upload PDF or DOCX: the software builds a concept map to guide outline and text, without reusing sentences from the sources.

• Regenerate web sources: only sources useful to the brief are kept.

• Sources guide work and checks; they do not automatically become a bibliography or published text.

Editorial memory and continuity

• Brief, plan, outline, written sections and approved edits feed a structured editorial memory.

• Each new section continues **from the ending** of the previous one, avoiding jumps and repetitions.

• The **consistency sheet** updates itself after every section: where characters are and what they know, ideas and terms already explained, promises and mysteries still open. You can edit it in the Book plan panel.

• If you edit a text manually, save the session so the project keeps the updated version.

Saving and recovery

Button	What it does
Save session	Saves sidebar, plan, outline, sections, sources, images and memory to your account.
Refresh latest draft	Restores the last saved snapshot. Use it after sign-in, sign-out, refresh or a device change.
Refresh page	Reloads the interface. After important edits, save the session first.
Sign out	Attempts a final save before closing. For a portable copy also use the CSV export.

5 Professional outline

Section 1 turns brief and plan into an editable structure. The outline includes the Preface and defines the sections available in the editor.

What the commands do

Command	Result
Generate professional outline	Studies brief, book plan and, if enabled, research. Produces a hierarchical outline with Preface.
Progress bar	Shows the generation stage. If no usable outline appears, the existing project is not deleted.
Outline score or review	Highlights possible improvements without adding useless entries.
Save and synchronize chapters	Makes the outline entries available in Writing, Preview and export.
Manual edit	You can revise titles and structure. Save and synchronize again after editing.

Structure and quality

• For novels the outline follows a three-act arc: inciting incident within the first 10%, turning point at 25%, midpoint reversal, lowest point at 75%, then climax and epilogue.

• If the plan contains a setup map, the chapters it mentions must exist in the outline.

• Compact aims at a short book, Standard KDP at a medium manuscript, In depth at a longer treatment. The system does not add useless chapters just to reach a page count.

6 Book plan

In section 2, the **Book plan** panel holds the plan that guides every section. It adapts to the genre and is filled in automatically by the Guided chat; you can edit it whenever you like.

Fields by type of book

Type	Fields	How the AI uses them
Novels	Characters and world · Hidden truth and timeline · Setup map	Treats characters and places as canon, does not reveal the truth too early, plants and pays off each setup in the indicated sections.
Essays	Central thesis and key ideas	Each chapter develops idea, evidence, objection and summary in support of the thesis.
Manuals	Learning objectives and prerequisites	Moves from simple to complex, never using concepts not yet explained.
All	Section outline · Consistency sheet	Follows the outline points and never contradicts the sheet.

Panel commands

Command	What it does
Propose the full plan	Fills in empty fields and the outline of every section in a single request. What you already wrote stays unchanged.
Update the sheet from written chapters	Novels only: updates characters and world by reading the sections already written.
Consistency sheet	Updates itself after each written section. Nothing to press.
Review the chapter	An editor rereads the selected chapter and flags inconsistencies, repetitions, weak points and facts to verify. It does not change the text.

Setup map format

• One setup per line: - *The father's letter* | *appears: Chapter 2* | *resolves: Chapter 11*.

• The format is recognised in every language of the site.

7 Writing and quizzes

In section 2 you write one entry at a time or start full writing. The created text stays editable in the professional editor.

Writing a section

• Choose the section and press Write detailed content. The result is saved and appears in the editor and in the preview.

• Each section receives plan, outline, consistency sheet and the structure of its genre: a hook when a chapter opens and a reason to keep reading when it closes; evidence and objections in essays; steps with the expected result, summary and exercise at the end of chapters in manuals.

• Novels use dedicated writing instructions: scenes, dialogue, a consistent narrative voice, no checklists. Italian dialogue uses the «…» quotation marks.

• Lengths are flexible: a short, intense scene is not padded with filler.

• Rework with AI improves only the selected section according to a precise request.

Facts to verify

• In essays and manuals an uncertain fact is marked **[TO VERIFY]** instead of being invented (the mark follows the book language, e.g. [DA VERIFICARE] in Italian).

• Check every marked fact and delete the mark once verified. Word and PDF remove it anyway.

Write the whole book

• If the outline is missing, the software first prepares the book plan automatically (cost shown in the estimate).

• It then works section by section, Preface included; the bar shows progress and the current section.

• Pause keeps what is completed; Resume continues from the missing sections; Stop permanently leaves outline and texts intact.

Manual edits

• You can rewrite any text directly in the editor. Save the session after an important edit.

• If you change the outline, synchronize it again.

8 Preview

Section 3 lets you read the book as a continuous manuscript before exporting.

• Use the clickable outline to reach a section, the manuscript search and the voice reader to listen to the text.

• The page estimate uses the words already written and a cautious forecast for missing sections. It is an indicator, not a promise.

• Manual edits and new sections appear here after saving and synchronizing the outline.

9 Import Export Copyright

Section 4 contains backup, recovery, checks and final files. Export is always possible, but an editorial warning invites you to fix issues before publishing.

Complete CSV

Command	What it does
Export complete project CSV	Downloads sidebar, book plan, outline, sections, sources, images and memory as a portable copy.
Import and restore project	Loads a CSV exported by the software and restores the project in the current page.
Check manuscript completeness	Flags empty or incomplete sections. It does not rewrite the book automatically.

Ready to publish

• Structure, manuscript and complete sentences must be checked.

• While **[TO VERIFY]** facts remain, the export is flagged as a draft and you get the list of sentences to check.

• **Editorial advice** (does not block export): setups without a payoff or pointing to missing chapters, mysteries still open according to the consistency sheet, expressions repeated more than 3 times, clichés, Italian dialogue without «…».

Originality, copyright and KDP

• The local originality check compares the manuscript only with uploaded PDF and DOCX files.

• The web copyright check (Expensive brain) flags similarities or points to verify. It does not legally certify originality.

• The KDP compliance check reads the official guidelines and produces a report; it does not guarantee publication.

Word and PDF

• Download Word to keep revising in an external editor, or PDF for a typeset version. Always check the final file before submitting it.

10 KDP formatting and metadata

Section 5 prepares useful material before final publication.

Feature	What it does
Generate detailed metadata	Analyses an uploaded manuscript and proposes a marketing description and seven long-tail keywords in the selected language.
Format document	For a DOCX applies 6 x 9 settings, margins, fonts, headings, indents, justified text and page numbers.
Download Word 6 x 9	Downloads the formatted DOCX. Always check the result in your layout program or in the KDP previewer.

11 Credits, security and good practice

The app shows an estimate before paid AI actions. The estimate shown always prevails over this guide.

What uses credits

Action	Indicative credits
Reading, editing, saving, importing, exporting	Free
Automatic consistency sheet after each section	Free
Propose the full plan	2 credits (also when prepared automatically by Write the whole book)
Review the chapter · Update the character sheet	1 credit each
Outline, writing, chats, research, checks and metadata	See the price list of the selected engine

• Do not paste unnecessary sensitive data. Keep a CSV of the project and verify facts, quotations, rights and technical data.

• The software does not publish books automatically: final review and compliance with KDP rules remain your responsibility.

If something does not appear

• After signing in or changing device, press Refresh latest draft.

• If a section is written but not visible, check that the outline is saved and synchronized.

• The Book plan panel appears in Write the book once the outline exists.

• To start a new book use Reset project: it is the only command that deletes the whole open project.
